PROFESSIONAL SUMMARY

Computer Science graduate targeting entry-level Software Engineer and Full Stack Developer roles, with hands-on experience building RESTful APIs and web applications using React.js, Node.js, Express.js, NestJS, and TypeScript. Built backend features with Prisma ORM, SQL databases, Zod validation, authentication, and structured logging, alongside React interfaces and MongoDB-backed workflows. Complementary experience includes PyTorch-based Vision Transformer research and Wipro TalentNext Data Science training.

TECHNICAL SKILLS

Frontend	React.js, JavaScript (ES6+), HTML5, CSS3, Responsive UI, Single-Page Applications
Backend	Node.js, Express.js, TypeScript, Python, Flask, REST API Design & Integration, Zod
Databases	MySQL, MariaDB, MongoDB, SQLite, Prisma ORM, Schema Design, CRUD
AI / ML	Vision Transformers (ViT), CNN, Deep Learning (PyTorch), Data Analysis
DevOps/Tools	Git, GitHub, Docker,Netlify, Version Control
Core CS	Data Structures & Algorithms, OOP, Debugging, Testing, Authentication

PROJECTS

HisNet: ViT-based Automated Grading of Osteosarcoma *Python · PyTorch · Vision Transformer · Deep Learning*
Final Year Project — Academy of Technology (MAKAUT) | Jul–Dec 2025 | Guided by Prof. Supantha Das

- Designed HisNet, a ViT-based deep learning framework to classify osteosarcoma whole slide images (WSIs) into Viable Tumor, Necrotic Tumor, and Non-Tumor classes; outperformed prior CNN-based CAD systems.
- Implemented stacked Multi-Head Self-Attention (MHSA) + MLP modules; processed 5,116 patches extracted from 942 WSIs (50 patients) at 128×128 resolution with rotation, flipping, and contrast augmentation.

Internal Engineering Task Management System *TypeScript · Express.js · Prisma · MariaDB*
github.com/suvajit04/Internal-Engineering-Task-Management-System

- Developed the backend foundation for an internal engineering task-management platform using TypeScript and Express.js, with versioned REST routing, environment-based configuration, and a health-check endpoint.
- Modeled users and roles with Prisma ORM and MariaDB/MySQL; added Zod validation, centralized error handling, request correlation IDs, and rotating Winston logs for reliable, traceable API operations.

MedPulse — Medical Shop Management System *React.js · Node.js · MongoDB · REST API*

- Architected MERN stack medical shop system with 10 modules covering billing/POS, inventory, expiry tracking, prescription handling, customer records, and supplier workflows.
- Implemented REST APIs, MongoDB schemas, authentication, authorization, and AI demand forecasting features to support stock planning, medicine availability, and daily pharmacy operations.

POY Utility Calculators *HTML5 · CSS3 · JS | poy-calculator.netlify.app*

- Developed a responsive single-page utility calculator for mechanical and practical computation workflows, enabling fast calculations for workshop, maintenance, and manufacturing use cases.
- Implemented interactive inputs, reusable calculation logic, and instant output rendering to deliver a smooth, user-friendly experience for technicians and engineers.
- Structured the frontend with modular components, clean UI sections, and clear logic separation to improve readability, maintainability, and future feature expansion.

EXPERIENCE

Software Development Engineer Intern *August 2026 – Present*
IVYLEAGUE CSFORALL ACADEMY PRIVATE LIMITED

- Developed and enhanced backend microservices for candidate management, user administration, and slot booking using Node.js, Express.js, TypeScript, Sequelize, Prisma, and MySQL.
- Implemented automated candidate follow-up workflows using BullMQ, Redis, and scheduled jobs to manage booking reminders and abandoned-form email/WhatsApp notifications.
- Integrated asynchronous notification processing between microservices and implemented user-creation workflows with credential email notifications.
- Improved candidate and user management APIs by enhancing partial-name search, profile retrieval, CSV exports, request validation, and database operations.
- Contributed to admin-panel authentication and user-management features; debugged API, database migration, queue-processing, and integration issues through functional testing.

CERTIFICATIONS & TRAINING

Wipro TalentNext — Data Science Training *July–October 2025* | View PDF
Completed industry training in data analysis, visualization, and ML fundamentals using Python, SQL, and data pipelines; practiced Git-based collaborative Agile workflows.

EDUCATION

B.Tech in Computer Science & Engineering — Academy of Technology (MAKAUT), West Bengal *Graduated: August 2026*
Higher Secondary (WBCHSE) — Mugberia Gangadhar High School **85%** *2022*
Secondary (WBBSE) — Mugberia Gangadhar High School **81%** *2020*
